Swag Labs
User Story - Inventory Page

Prerequisites:

- User has a valid account and is successfully logged in.
- Website is accessible and internet connection is stable.
- User is on the Inventory Page: Swag Labs

Acceptance Criteria:

As a logged-in user
I want to browse products on the inventory page
So that I can view details, add/remove items from the cart, sort products, and access social media links.

1. Product Interaction

- User can add an item to the cart directly from the inventory page.
- User can click on an item to view its details on a separate page and add it to the cart from there.
- After adding an item:
  - The cart icon (top-right) increases the item count by 1.
  - The button next to the product changes from Add to cart → Remove.
- After removing an item:
  - The cart icon decreases the item count by 1.
  - The button next to the product changes back to → Add to cart.
- User can navigate back from the product detail page to the inventory page without losing state.

2. Sorting Options

- A sorting dropdown exists in the top-right corner with options:
  - Name (A to Z) → **default option when the page loads or refreshes**
  - Name (Z to A)
  - Price (low to high)
  - Price (high to low)
- When selecting any option, products should reorder according to the chosen criteria.

3. Social Media Links

- Social icons (LinkedIn, Facebook, and Twitter) are visible at the bottom-left.
- When the client clicks on any icon, they are redirected to the official corresponding social media page of the website.

Expected Results:

- Cart counter correctly reflects the number of added items at all times.
- Add/Remove button toggles correctly per product.
- Default sorting is always **Name (A → Z)** when the inventory page loads or refreshes.
- Sorting instantly rearranges displayed products according to the selected filter.
- Navigation between product detail page and inventory page works smoothly without resetting the cart or sort order.
- Social media links open the correct external pages in a new tab/window.

Dependencies:

- **Cart Service**: According to the user action (Add/Remove), the cart should update the counter and item status consistently across pages.
